Background

TechIT Solutions is a service-based company that provides IT and business-support services to industries such as finance, healthcare and retail. With a workforce of around 10,000 employees, the company noticed rising employee turnover that was hurting project delivery and team stability.

Problem Statement

Despite a large workforce, attrition keeps rising and there is no clear visibility into:

- Which departments or roles are most affected?
- What factors are driving attrition?
- How company policies (travel, overtime) influence turnover?

Why It Needs to Be Solved

- Loss of talent & high costs** – Attrition means lost knowledge, higher hiring costs and disrupted project delivery.
- Employee turnover is high** – Frequent resignations disrupt projects and raise recruitment and training costs.
- No clear insights** – HR initiatives are generic instead of targeted.

Business Questions

- What is the overall attrition rate?
- Which departments are facing the highest attrition and why?
- How does job role influence attrition rates?
- Is there a correlation between distance from home and attrition?
- Is overtime contributing to higher attrition?
- How do job & environment satisfaction affect retention?
- Are employees with low work-life balance more likely to quit?
- Are employees with frequent business travel more likely to leave?
- Do years in the same role correlate with leaving?
- Are salary hikes influencing retention effectively?

[See the answers on the Insights page →](#)

Stakeholders

- HR Department** – improve retention and satisfaction
- Department Heads & Team Leads** – keep teams from being overworked
- Business Leaders / Executives** – make strategic decisions on attrition trends
- Recruitment Team** – plan hiring for roles where people leave more often
- Payroll / Finance Team** – track the cost of attrition and savings from retention

After Solving the Problem

- Clear attrition drivers** – Root causes identified across roles, departments and working conditions.
- Targeted retention plans** – Timely promotions, role changes or benefits for at-risk employees.
- Smarter decisions** – Leaders use the dashboard instead of relying on assumptions.
- Happier employees stay longer** – Valued employees are more engaged and more likely to stay.

Excel Skills Used

- Excel Table (tblHR) with 4 calculated columns
- 25 PivotTables sharing one PivotCache
- PivotCharts – bar, column, pie, line & area
- 4 Slicers (Gender, Job Level, Job Role, Department) connected to every pivot on both dashboards
- GETPIVOTDATA formulas that feed the live KPI cards and the heat map
- AVERAGEIFS, COUNTIFS and CORREL on the Insights page
- Conditional formatting (colour scales & data bars)
- Custom-drawn icons & banner, shapes and hyperlink navigation

How to Use This Workbook

- Open the Overview dashboard (button above or the Overview tab).
- Click any button in the filter bar – every KPI, the heat map and every chart update.
- Ctrl + click to select several items in one slicer.
- Clear a filter with the clear-filter icon at the top-right of each filter.
- The Drivers page shows attrition RATE (%) for each factor.
- Insights answers the 10 business questions with live formulas.
- Tip: press Ctrl + F1 to hide the ribbon for a full-screen view.

Key Insights & Recommendations

Answers to the 10 business questions | numbers in blue are live formulas on tblHR (all employees)

[Home](#)[Overview](#)[Drivers](#)[Insights](#)[Data](#)[Dictionary](#)

Answers to the 10 business questions

#	Business question	Key numbers (live formula)	What the data says	Recommendation
Q1	What is the overall attrition rate?	Rate: 22.47% 2,247 left of 10,000	22.47% of employees have left: 2,247 of 10,000, leaving 7,753 active employees. Roughly 1 in 4.5 employees has left, which is high for an IT-services business.	Track attrition rate monthly as a headline HR KPI and set a reduction target (e.g. below 18%).
Q2	Which departments are facing the highest attrition and why?	Cyber Security: 24.2% Network Admin.: 21.1%	Cyber Security has the highest rate (24.2%, 503 leavers) and Network Administration the lowest (21.1%). The spread is only ~3 points, so attrition is a company-wide problem. Cyber Security has the joint-longest average commute (26 km) and above-average overtime (31%), which are both proven drivers.	Start retention pilots in Cyber Security, but fix the company-wide drivers (commute, travel, overtime, promotions) rather than treating one department.
Q3	How does job role influence attrition rates?	Consultant: 24.8% Director: 24.2% Manager: 20.9% Support: 21.1%	Consultants (24.8%) and Directors (24.2%) leave most often, followed by Help Desk (23.3%) and QA Analysts (23.2%). Managers (20.9%) and Support (21.1%) leave least. The ~4-point range shows role matters less than working conditions.	Hold stay-interviews with Consultants and Directors, and review their travel load and career paths.
Q4	Is there a correlation between distance from home and attrition?	1-10 km: 8.6% 41-50 km: 29.9% Correlation r = 0.15	Yes – this is one of the strongest drivers. Employees living 1–10 km away leave at 8.6%, versus ~26% beyond 10 km and ~30% beyond 40 km. Leavers commute 29.5 km on average versus 24.3 km for those who stay.	Offer hybrid / remote days, a transport allowance or relocation support to employees living more than 10 km away.
Q5	Is overtime contributing to higher attrition?	Overtime: 26.2% No overtime: 20.9%	Yes. Employees working overtime leave at 26.2% versus 20.9% for those who don't. 35.5% of leavers worked overtime compared with 29.1% of those who stayed.	Cap regular overtime, balance workloads across teams and give comp-offs for extra hours.
Q6	How do job and environment satisfaction affect retention?	Environment 1-3: 29.9% 4-5: 11.4% Job sat. 1-2: 26.9% 3-5: 19.5%	Strongly. Environment satisfaction of 1–3 gives ~30% attrition versus ~11% for scores 4–5. Job satisfaction of 1–2 gives ~27% versus ~20% for 3–5. Leavers score 2.5 on environment satisfaction versus 3.1 for stayers.	Run quarterly pulse surveys and act quickly on teams scoring 1–2: workspace, tools, manager support and recognition.
Q7	Are employees with low work-life balance scores more likely to quit?	WLB 1-2: 31.0% WLB 3-5: 16.8%	Yes – almost twice as likely. Work-life balance scores of 1–2 give ~31% attrition versus ~17% for scores 3–5.	Introduce flexible hours, protect leave, and review workload for employees reporting poor balance.
Q8	Are employees with frequent business travel more likely to leave?	Frequent: 34.3% Rarely: 19.7% None: 18.8% Frequent + OT: 38.9%	Yes. Frequent travellers leave at 34.3%, compared with 19.7% (travel rarely) and 18.8% (no travel). When frequent travel is combined with overtime, attrition reaches 38.9%, the highest-risk group in the data.	Rotate travel assignments, use virtual meetings where possible and add travel allowances or recovery days.
Q9	Does the number of years in the same role correlate with the likelihood of leaving?	Years in role: r = -0.01 Promoted <=1 yr ago: 10.1% 2+ yrs: 26.1%	No. Attrition stays between ~20% and ~24% for 0–10 years in the current role with no trend (leavers 4.9 yrs vs stayers 5.0 yrs). What does matter is years since last promotion: 10% attrition if promoted within a year versus ~26% after 2+ years.	Review every employee without a promotion for 2+ years and define clear promotion or role-change paths.
Q10	Are salary hikes influencing employee retention effectively?	Hike 0-10%: 22.4% 91-100%: 22.8% Correlation r = 0.01	No. Attrition is flat at ~21–24% across every salary-hike band (0–10% hike: 22.4%, 91–100% hike: 22.8%). Leavers actually received a slightly higher average hike (50.6%) than stayers (50.0%).	Stop relying on blanket hikes. Redirect budget to promotions, flexibility and commute or travel support for high-risk groups.

Top 5 actions for HR

#	Action	Details
1	Reduce commute pain	Hybrid / remote days or transport allowance for employees living > 10 km away (they leave ~3× more often).
2	Fix travel & overtime policy	Rotate travel, cap overtime, give comp-offs. Frequent travel + overtime = 38.9% attrition.
3	Unblock careers	Promotion / role-change review for everyone without a promotion in 2+ years (~26% attrition).
4	Improve balance & environment	Flexible hours, workload reviews and workspace fixes for teams scoring 1–2.
5	Retarget pay budget	Salary hikes do not change attrition. Invest in the drivers above instead.

Attrition rate by factor (all employees)

Factor group	Employees	Attrition rate	Employees who left
Business Travel Travel Frequently	2,014	34.3%	690
Business Travel Travel Rarely	5,988	19.7%	1,182
Business Travel No Travel	1,998	18.8%	375
